```
This sequence represents a Helicobacter pylori GHPO protein of the invention. The polypeptides can be used for preventing or treating Helicobacter infections, and gastroduodenal diseases associated with these infections, including acute, chronic, and atrophic gastritis, and peptic ulcer diseases, e.g. gastric and duodenal ulcers. They can also be used for the production of gattic and duodenal ulcers. They can also be detection and diagnosis.
                                                                                                                                                                                                                                                                                                                                                       Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the

The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide comprises at least 15 nucleotides, or (b) a combination of an oligonucleotide comprises a sequence complementary to the complementary strand of a polynucleotide which comprises a 5.-end sequence and an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5.-end sequence and an oligonucleotide comprises a 3-end sequence. The complementary to a polynucleotide which comprises at least 15 nucleotides and the combination of the specification. The primer sets can be used in antisense therapy and in gene therapy. The primer sets can be used in antisense therapy and in gene therapy. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers are also useful for the CDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13631 to AAH13613 to AAH13632 to Febreacht human amino acid sequences; and AAH13632 to AAH13632 to Febreacht human amino acid sequences; and AAH13632 to AAH13632
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              7;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              nootropic; immunosuppressant; cytostatic; gene therapy; cancer;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM3642-AAM42213) with nootropic, immunosuppressant and cytostatic activity The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system, such as peripheral nervous system, such as peripheral nervous system diseases, such as lateriar solerosis, and Shy-Drager Sydrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activit/inhibin activity, chemotectic/chemokinetic activity, democratic/chemokinetic activity, dand thrombolytic activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Note: The sequence data for this patent did not form part of the printed specification.
                                                                                                                                                                                                                                     ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; nootropic; immunosuppressant; cytostatic; gene therapy; cancer; peripheral nervous system; neuropathy; central nervous system; CNS; Alzheimer's; Parkinson's disease; Huntington's disease; haemostatic; amyotropic lateral sclerosis; Shy-Drager Syndrome; chemotactic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              72 VITEITGFIEHVELAGEHENKADLILVCPATANTISKIACGIDDTPVTTVVTTAFPHIPI 131

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM3642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynuclectides are useful in gene therapy. A composition containing a polypeptide or polynuclectide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous system, such as peripheral nervous system diseases, such as Albeimer's, Parkinson's disease, Huntingfon's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, activity, chemotexic/chemokinetic activity, demonstric/chemokinetic activity, and thrombolytic activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The sequence data for this patent did not form part of the printed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ά
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 72 VITEITGFIEHVELAGEHENKADLILVCPATANTISKIACGIDDTPVTTVVTTAFPHIPI 131

including but not limited to, production disorders, and compositions of the observed and reduction disorders, infertility including tubal disease, ovulatory defects, endometriosis, disruptions of the oestrous and menstrual cycles, polycystic ovary sydrome, ovarian hyperstimulation syndrome, endometrial and ovarian tumours, uterine fibroids, autoimmune disorders, ectopic pregnancy, teratogenesis, breast cancer, fibrocystic breast disease, galactorrhoea, disruptions of spermatogenesis, abnormal sperm physiology, testis cancer, prostate cancer, benign prostatic hyperplasia, prostatitis, Peyonie's disease, male breast carcinoma and gynecomastia; gastrointestinal disorders including, but are not limited to, dysphagia, peptic oesophagitis, oesophageal spasm and stricture, oesophageal carcinoma, dyspepsia, indigestion, gastritis, gastric carcinoma, anorexia, nausea, emesis, gastroparesis, intestinal stricture, oesophageal carcinoma, dyspepsia, indigessio, discrease, mallory-Weiss syndrome, irritable bowel syndrome, short bowel syndrome, diarrhoea, constipation, cirrhosis, jaundice, and hepatic vein thombosis; nervous cancer and constipation, diarrhoea, constipation, cirrhosis, jaundice, and hepatic vein thombosis; nervous cancer and constipation, diarrhoea, 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel human receptor molecules used in the diagnosis, treatment and prevention of neoplastic, immunological, reproductive gastrointestinal, nervous, smooth muscle and musculoskeletal disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               including muscular dystrophy, central core disease, nemaline myopathy, centronuclear myopathy, lipid myopathy, inclusion body myositis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          amnesia, bipolar disorder, catatonia, cerebral neoplasms, Down's syndrome, and dystonias; smooth muscle cell disorders including, but not limited to, angina, anaphylactic shock, arrhymia, cardiovascular shock, migraine, and pheochromocytoma; musculoskeletal disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               thyrotoxic myoapathy, and ethanol myopathy; immunological disorders including AIDS, Addison's disease, adult respiratory distress syndrome, allergy, ankylosing spondylitis, amyloidosis, anamemia, asthma, atherosclerosis, autoimmune hemolytic anaemia, autoimmune thyroiditis, bronchitis, cholecystitis, contact dermatitis, Crohn's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence represents a human receptor molecule (REC) encoded by Incyte cDNA clone 202379. The invention provides human RECs and polynucleotides which identify and encode REC, as well as vectors, host cells, antibodies, agonists and antagonists. Human vectors, host colls, antibodies, agonists and antagonists. Human reproductive gastrointestinal, nervous, smooth muscle and agonists, and compositions can be used to treat: a reproductive disorder,
                                                                                                                                                                                                                              Receptor; REC; human; diagnosis; therapy; neoplastic disorder; immunological disorder; reproductive disorder; nervous disorder; gastrointestinal disorder; smooth muscle disorder;
                                                                                                                                                                           Human receptor molecule (REC) encoded by Incyte clone 2022379.

The Vb89 clone encodes the Arabidopsis thaliana HAL3 homologue, a halotolerant gene isolated in Saccharomyces cerevisiae. The Vb89 clone interacts with A. thaliana CDC2D (a cyclin-dependent protein kinase (CDC2) and CDC2D are the only CDK genes to have been characterized in decail in Arabidopsis thaliana. They were used as bait in a two-hybrid strening assay with a cDNA library of a plant cell suspension as previous plant a coll cycle interacting proteins identified were designated correcting assay with a cDNA library of a plant cell suspension as previous the protein substant cell suspension as previous vectors comprising them, the proteins they express, antibodies that blind to them and or inhibitors of their protein expression and/or activity may be used for modulating the cell cycle in an animal or plant, plant cell division and/or growth, for influencing the activity of cell cycle proteins in a plant or animal cell, as positive or negative regulators of cell proliferation, for influencing the growth inhibition caused by environmental stress conditions (e.g. to improve growth of plants in normal or suboptimal nutrient conditions, especially phosphorus), for use in a screening method for inhibitors or activators of cell cycle protein, as growth regulators, herbicides and/or for inducting nematode resistance in plants. The DNA sequences and their regulatory sequences may also be used as markers in plant or animal cell and regulatory sequences may also be used for the expression of heterologous DNA sequences during a stage of the cell cycle.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    217 AA;

(HELI-) HELIX RES INST

The present invention describes primer sets for synthesising 5602

(ull-length CDNsA defined in the Specification. Where a primer set

(ull-length CDNSA defined in the Specification. Where a primer set

to the complementary strand of a polynucleotide which comprises one of

the \$602 nucleotide sequences defined in the specification, where the

oligonucleotide comprises at least 15 nucleotides; or (b) a combination

of an oligonucleotide comprising a sequence complementary to the

complementary strand of a polynucleotide which comprises a 5'-end

sequence and an oligonucleotide comprising a sequence complementary to a

polynucleotide which comprises a 3'-end sequence complementary to a

journaleotide which comprises a 3'-end sequence where the

oligonucleotide comprises a 1-end sequence which comprises of

the 5'-end sequence/3'-end sequence is selected from those defined in

the specification. The primer sets can be used in antisense therapy and

in gene therapy. The primers are useful for synthesising polynucleotides,

particularly full-length cDNAs. The primers are also useful for the

detection and/or diagnosis of the abnormality of the proteins encoded by

the full-length cDNAs. The primers are also useful for the

detection and/or diagnosis of the abnormality of the proteins encoded by

the full-length cDNAs. The primers and also of the full-length

AB493831 represent human amino acid sequences; AA892446 to

AA8938931 represent human amino acid sequences; and AAH3632

of the present invention. ner sets for synthesizing polynucleotides, particularly the 5602 -length cDNAs defined in the specification, and for the detection or diagnosis of the abnormality of the proteins encoded by the Saito K, Otsuki Claim 8; SEQ ID 13699; 2537pp + CD ROM; English. The present invention describes the oxidative decarboxylation of a terminus the amino acid sequence (1) with EpiD; X1-X2-X3-X4-X5-X6-C (1) where X1, X2, X3 and X4 = any one of the 20 common amino acids; X5 = verwinus the amino acid sequence (1) with EpiD; X1-X2-X3-X4-X5-X6-C (1) where X1, X2, X3 and X4 = any one of the 20 common amino acids; X5 = ryr, Val, Met, Phe, IIe, Leu or Trp; and X6 = Cys, Ala, Ser, Val or Thr C (2) responding that the carboxy terminus of the peptide is not sequence compounds to the preparation of derivatives of known peptides and hormones with a cystelne residue in the unmodified peptide replaced or supplied experimental purposes or for the formation of novel compounds for experimental purposes or for the formation of known compounds for experimental purposes or for the formation of known compounds for experimental purposes or for the formation of known compounds for experimental purposes or for the formation of known compounds for experimental purposes or for the formation of known compounds for experimental purposes or for the formation of known compounds for experimental purposes or for the formation of known compounds for experimental minion and acid residues and/or and also be analyor and also be analyor and also be achieved using this method retain the biological activity of the parent compound but we have increased stability and improved half-lives. Ant/43418 to AA443475, of the present invention.
                                                                                                                                                                             Staphylococcus epidermis; epidermin; epiA; epiB; epiD; epiP; epiQ; epiY'; epiY''; oxidative carboxylation; flavoprotein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Oxidative decarboxylation of peptides by the flavoprotein EpiD
                                                                                                                                       S. epidermis reading frame epiD protein sequence.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This is the amino acid sequence of the P50 component of the polymerase enhaning factor (PEF) of Pyrococcus furiosus DSM 3638.

The sequence is predicted from a DNA sequence (see AAV63859) obtained from genomic DNA by PCR. P50 and P45 (see AAW72847) are the predominant components of PEF, which acts to enhance the activity of predominant components of PEF, which acts to enhance the activity of P. furiosus DNA polymerase, thereby providing replication products of greater length and purity. P50 is similar in structure to a parterial flavoprotein. The invention provides novel extracts, proteins and complexes that improve the polymerisation activity of nucleic acid polymerases, as well as DNA constructs and antibodies raised against P45 or P50. Also included are methods for identifying compositions with polymerase enhancing activity, for proteins and complexes that function to enhance polymerase activity. Nucleic acid polymerase reactions can be enhanced (claimed) by composition having polymerase enhancing activity. Kits are provided for replicating nucleic acid template, at least 1 polymerase and a composition having polymerase enhancing activity. Kits are provided for replication nucleic acid sequencing or amplification sylendiance. Site-directed mutagenesis, nucleic acid sequencing or amplification controlled acid sequencing or amplification controlled.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         PYAWNLPTGNPVITEITGFIEHVELAGEHENKADLILVCPATANTISKIACGIDDTPVTT 120

```
This peptide comprises the N-terminal portion of the P50 component of the polymerase enhancing factor (PEF) of procedus furiosus furiosus of isolated P50 bNA (ase AAV0589) and corresponds to a chemically determined N-terminal peptide (see AAW07800). PEF, the predominant components of which are P50 and P45 (see AAW07807) proteins, enhances the activity of P furiosus DNA polymerase, thereby providing replication products of greater length and purity. The invention replication products of greater length and purity. The invention provides novel extracts, proteins and complexes that improve the provides novel extracts, proteins and complexes that improve the provides novel extracts, proteins and complexes that improve the provides any included are methods for identifying compositions of peptide. Also included are methods for identifying compositions and specific extracts, proteins and complexes that function to enhance polymerase activity. Nowlels acid of polymerase compositions, and specific extracts, proteins and complexes that function to enhanced (claimed) by mixing a nucleic acid compact cape activity. Kits are provided for replicating nucleic acid acids. The Kits can be used in site-directed mutagenesis, nucleic acid acids. The Kits can be used in site-directed mutagenesis, nucleic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Polymerase enhancing factor proteins, extracts and complexes - improve the polymerisation activity of nucleic acid polymerases, for use in amplification, sequencing and replication
                                                                                                                                                                                                                       Polymerase enhancing factor P50 component N-terminal peptide.
                                                                                                                                                                                                                                                        Polymerase enhancing factor; PEF; DNA polymerase; PCR; amplification; sequencing; replication.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This is a tryptic peptide of the P50 component of the polymerase enhancing factor (PEF) of Pyrococcus furiosus DSM 3638. It was obtained by tryptic digestion of P50 protein isolated from a PEF complex. PEF, the predominant components of which are P50 (see AAW72844) and P45 (see AAW72847), enhances the activity of P. furiosus DNA polymerase. The invention provides novel extracts, proteins and complexes that improve the polymerisation activity of nucleic acid polymerases. These can be used to improve nucleic acid polymerases. These can be used to improve nucleic acid polymerases.
                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Polymerase enhancing factor proteins, extracts and complexes -

This peptide comprises an internal peptide of the P50 component of the polymerase enhancing factor (PEF) of Pyrococcus furiosus DSM 3638. It is obtained from the translated sequence (see AAM7284) of isolated P50 DNA (see AAM72859) and corresponds to a chemically determined N-terminal peptide (see AAM72862). PEF, the predominant components of which are P50 and P45 (see AAM72847) proteins, enhances the activity of P. furiosus DNA polymerase, thereby providing replication products of greater length and purity. The invention provides novel extracts, proteins and complexes that improve the polymerisation activity of nucleic acid polymerases. These complexes may include proteins including the P50 internal peptide. Also included are methods for identifying compositions with polymerase enhancing activity, for purifying and using these compositions, and specific extracts, proteins and complexes that function to enhance polymerase activity. Nucleic acid polymerase reactions can be enhanced (claimed) by maxing a nucleic acid cenhancing activity. Kits are provided for replication nucleic ending activity. Kits are provided for replicating nucleic acid cenhancing activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Polymerase enhancing factor proteins, extracts and complexes -

This is an N-terminal peptide of the P50 component of the polymerase enhancing factor (PBF) of Pyrococcus furiosus DSM 3638. It was obtained by N-terminal sequencing of P50 isolated from a PEF complex. PEF, the predominant components of which are P50 (see AAW72844) and P45 (see AAW72847), enhances the activity of P. furiosus DNA polymerase. The invention provides novel extracts, proteins and complexes that improve the polymerisation activity of nucleic acid polymerases. These can be used to improve nucleic acid replication, polymerisation and amplification (especially in PCR or RT-PCR).
Polymerase enhancing factor proteins, extracts and complexes -
improve the polymerisation activity of nucleic acid polymerases, for
use in amplification, sequencing and replication
                                                                                                                                                                                   Example 5; Page 32; 161pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 35
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence

Polymerase enhancing factor proteins, extracts and complexes -
improve the polymerisation activity of nucleic acid polymerases, for
use in amplification, sequencing and replication
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This is an N-terminal peptide of a 150 kDa component of the polymerase enhancing factor (PEF) of Pyrococcus furiosus DSM 3638. PEF, the predominant components of which are P50 (see AAW72844) and P45 (see AAW72847), enhances the activity of P. furiosus DNA polymerase. The invention provides novel extracts, proteins and complexes that improve the polymerastion activity of nucleic acid polymerases. These can be used to improve nucleic acid replication, polymerases.
                                                                                                                                                                                                                                        /note= "this residue may be deleted or substituted
by any amino acid but is tentatively
assigned as indicated"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Polymerase enhancing factor 100 kDa protein N-terminal peptide.
                                                             Polymerase enhancing factor 150 kDa protein N-terminal peptide.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This is an N-terminal peptide of the P50 component of the polymerase enhancing factor (PBF) of Pyrococcus furiosus DSM 3638. It was obtained by N-terminal sequencing of P50 isolated from a PEF complex. PEF, the predominant components of which are P50 (see AAW72844) and P45 (see AAW72847), enhances the activity of P. furiosus DNA polymerase. The invention provides novel extracts, proteins and complexes that improve the polymerisation activity of nucleic acid polymerases. These can be used to improve nucleic acid conjugation, polymerisation and amplification (especially in PCR or

This is an N-terminal peptide of the P50 component of the polymerase enhancing factor (PEE) of pyrococcus furiosus DSM 3638. It was obtained by N-terminal sequencing of P50 isolated from a PEE complex. PEE, the predominant components of which are P50 (see AAW72844) and P45 (see AAW72847), enhances the activity of P. furiosus and complexes that improve the polymerastics proteins and complexes that improve the polymerisation activity of nucleic acid polymerases. These can be used to improve nucleic acid. The instanton and amplification (especially in PCR or
                                                                                                                                                                                                                                                                                                                                                                                      Polymerase enhancing factor proteins, extracts and complexes - improve the polymerisation activity of nucleic acid polymerases, for use in amplification, sequencing and replication
                      "this residue may be deleted or substituted
by any amino acid but is tentatively
assigned as indicated"
                                                                                                                              Anote- "this residue may be deleted or substituted by any amino acid but is tentatively assigned as indicated"

                                                                                                                                                                                                                                                                                                                                                                   Polymerase enhancing factor proteins, extracts and complexes - improve the polymerisation activity of nucleic acid polymerases, for use in amplification, sequencing and replication
                                                                                                                                                                                                                                                                                                                                                                                                                                                  This is an N-terminal peptide of a 100 kDa component of the polymerase enhancing factor (PEF) of Pyrococcus furiosus DSM 3638. PEF, the predominant components of which are P50 (see AAW72844) and polymerase. The invention provides novel extracts, proteins and complexes that improve the polymeration activity of p. furiosus DNA complexes that improve the polymeration activity of nucleic and polymerases. These can be used to improve nucleic acid replication polymerisation and amplification (especially in PCR or RT-PCR).
                                                                                            /Jabel= Lys, Leu

```
The present invention relates to Aspergillus fumigatus N-myristoyl transferase (NMT) gene and its use in identifying anti-fungal agents. NMT is responsible for cotranslational modification of a variety of fungal proteins. NMT catalyses the attachment f a 14-carbon saturated fatty acid to the N-terminal glycine residue of cellular proteins. This modification is thought to be irreversible and essential for the full biological activity of myristoylated proteins. The present sequence is Aspergillus fumigatus N-myristoyl transferase (NMT).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence is a H. pylori secreted protein.

The protein may be used in a vaccine to prevent or treat H. pylori infection or to identify H. pylori polypeptide binding compounds, useful as potential H. pylori life cycle activators or inhibitors. The DNA and probes derived from it may be used for the identification of H. pylori in a sample and the diagnosis of H. pylori infection. Nucleic acid sequences complementary to the DNA act as antisense sequences and
N-myristoyl transferase, useful for identifying anti-fungal agents

                                                                                                                                                                                                                                                                                                                                                                        This peptide is derived from an N-terminal peptide (see AAW72858) of the P50 component of the polymerase enhancing factor (PEF) of Pyrooccus furiosus DSM 3638. A degenerate primer (see AAW63871) based on the peptide has been used to amplify DNA (see AAW63871) coding for P50 protein (see AAW72844) from P. furiosus genomic DNA. PEF enhances the activity of P. furiosus DNA polymerase. The invention provides novel extracts, proteins and complexes that improve the polymerisation activity of nucleic acid polymerases. These can be used to improve nucleic acid replication, polymerisation and amplification (especially in PCR or RT-PCR).
                                                                                                                                                                                                                                                    Polymerase enhancing factor proteins, extracts and complexes -
improve the polymerisation activity of nucleic acid polymerases, for
use in amplification, sequencing and replication

The DNA and probes derived from it may be used for the diagnosis of diagnosis of H. Pylori infection. Wucleic acid sequences complementary to the DNA act as antisense sequences, and can be used to prevent the translation of H. Pylori mRNA. Antibodies against the protein can be used in immunoassays to evaluate the abundance and distribution of H. Pylori mRNA. Antibodies against the protein can confirm the protein can mechanically shearing the bacterial DNA. The sequences were necessary shearing the bacterial DNA. The sequences were coding regions defined by computer evaluation. To identify likely sequences predicted from various ORF were analysed for significant compost to other known or exported membrane proteins. Having regions can be isolated from H. Pylori by PCR analysed for significant dentified and determined the sequences of interest, particular regions can be isolated from H. Pylori by PCR analification for recombinant polypeptide production, e.g. in E. coli hosts.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter; termination sequence.

can be used to prevent the translation of H. pylori mRNA. Antibodies addinstribution of H. pylori-specific antigens. The gronnic sequence of by modistribution of H. pylori-specific antigens. The gronnic sequence of by mechanically shearing the bacteral and Na. The sequences were analysed for ORF of at least 180 nucleotides, and the predicted coding regions vaccine development. When the amino acid sequences predicted from various of membrane proteins. Having identified and determined the sequences of membrane proteins. Having identified and determined the sequences of amplification for significant homology to other known or exported interest, particular regions can be isolated from y sequences of amplification for recombinant polypeptide production, e.g. in E. coli

The protein may be used in a vaccine to prevent or treat H. pylori infection or to identify H. pylori polypeptide binding compounds, useful as potential H. pylori life cycle activators or inhibitors.
                                                                                                                                                                                                                                                                                                                                                                                            .;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Helicobacter pylori nucleic acid sequences and encoded polypeptide(s) - useful in vaccines to treat or prevent H. pylori infection and for diagnosis of H. pylori infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This sequence is a Helicobacter pylori protein of unspecified

THAT REQUIRES APP HYDROLYSIS. CLP MAY BE RESPONSIBLE FOR A FAIRLY GENERAL AND CENTRAL HOUSEKEPING FUNCTION RAPHER THAN FOR THE DEGRADATION OF SPECIFIC SUBSTRATES (BY SIMILARITY).

-!- CATALYTIC ACTIVITY: HYDROLYSIS OF PROTEINS TO SMALL PEPTIDES IN THE PRESENCE OF ATP AND WAGNESIUM. ALPHA-CASETN IS THE USUBLITES SUBSTRATE. IN THE ABSENCE OF ATP. ONLY OLIGOPEPTIDES SHORTER THAN FIVE RESIDUES ARE CLEAVED (SUCH AS SUCCINYL-LEU-TYR-I-NHWEC; AND LYR-I-TRP-BOND ALSO OCCURS).

-!- SIMILARITY: BELONGS TO PEPTIDASE FAMILY S14; ALSO KNOWN AS CLEPP FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              STRAIN-MOPN N.A.
